Summary of Qualifications:

Senior Oracle DBA and Cloud Engineer with 14 years of enterprise database experience, now bridging on-premises and cloud environments at American Express. Currently serving as Technical Architect at TCS, managing Oracle 11g/12c/19c RAC and Exadata alongside Amazon Aurora (EC2, RDS, EKS) Seeking in Terraform, Ansible, and Kubernetes-based automation — bringing infrastructure-as-code discipline to database operations at scale.

- **Database Administration:** Install, configure, and maintain Oracle databases in development, testing, and production environments both On-Premises and On Cloud
- **Performance Tuning:** Monitor and optimize database performance, including query optimization, indexing, and resource allocation.
- **Backup and Recovery:** Implemented and managed backup and recovery strategies to ensure data integrity and availability.
- **Security Management:** Configured and enforce database security policies, manage user access, and ensure compliance with security standards.
- **Patch Management:** Apply and test Oracle patches and updates to keep the database software current.
- **Troubleshooting:** Diagnose and resolve database issues, including performance bottlenecks, connectivity problems, and data corruption.
- **Documentation:** Maintain accurate documentation for database configurations, procedures, and processes.
- **Collaboration:** Work closely with developers, system administrators, and other IT staff to support database-related requirements and projects.
- **Capacity Planning:** Monitor and forecast database growth, and plan for future capacity requirements.
- **Disaster Recovery:** Develop and test disaster recovery plans to ensure data recovery in case of major failures.
- Implemented monitoring and alerting using OCI Monitoring, Logging, and Alarms for proactive issue detection.
- Expertise in **Banking, Energy, Telecom and HR** domains.
- Proficient in an assortment of technologies including **Linux/Unix, OpenStack Cloud, Web Servers, Ansible, Kubernetes, Shell Scripting and Programming.**
- 5+ year's working knowledge of Golden Gate configuration, maintenance, and support.
- Experience in **architecting, developing and maintaining automation** to configure, deploy and operate IDP in development, integration, and production environments.
- Experience in **IT infrastructure, hosting and contract operations** and responsible for firewall, security, and IT management.
- Experience with various **Application Performance Monitoring** tools such as **OEM, Grafana, Prometheus** to track metrics of Java and Python applications.
- 2+ yrs of technical experience on **Amazon Aurora, EC2, S3, Simple DB, RDS**, and other services in the AWS cloud infrastructure such as **IAAS, PAAS and SAAS.**

Technical Skills:

Database Technologies	ORACLE DBA,MYSQL, YUGABYTE
Cloud Stacks	AWS, OCI
Platforms	UNIX, LINUX (UBUNTU, Red Hat, CentOS), Windows XP/vista/7/8
Languages	SQL, PL/SQL,Core JAVA
Configuration Management Tools	OEM, Ansible, Prometheus,Grafana.
Methodologies	Agile, Scrum, Waterfall
Databases	SQL, MySQL, Oracle, AWS EC2, ELB, RDS ,EKS
Web Technologies	HTML, CSS, XML, node.js, Kafka, Terraform
Scripting Languages	Shell Scripting
Monitoring Tools	AppDynamics, Dynatrace, Splunk, Prometheus, Grafana, OEM

Professional Experience:

Tata Consultancy Services-Technical architect - American Express, Phoenix, AZ

March 2016 – Present

Role: - Senior Oracle Engineer

American Express is leading credit card company and it processes millions of transactions daily as the premium network for high spending customers. We support the Databases of version from 11g,12c,19c RAC and AWS that comes under cloud and database support.

Responsibilities:

- **Oracle Database Maintenance & Support:** Maintained and support Oracle databases, ensuring high availability, performance, and disaster recovery, including Real Application Clusters (RAC) and Exadata hardware.
- **Backup & Recovery:** Manage backup and recovery processes using RMAN and Oracle Secure Backup, and collaborate with business leaders on RPO (Recovery Point Objective) and RTO (Recovery Time Objective) strategies.
- **On-call Support:** Participate in an on-call rotation to provide support when necessary.
- **Automation:** Built automation scripts that reduced routine DBA task time by ~40%, covering patching, monitoring, and environment refresh for 200+ Oracle databases."
- **Database Performance:** Performed Oracle configuration, performance tuning, and code reviews for query optimization.
- **Environment Support:** Ongoing support across multiple environments (Development, Test, UAT, etc.) and manage Oracle refresh processes.
- **Backend Systems:** Designed and implemented backend systems with a focus on high availability, disaster recovery, data security, and compliance.
- **Maintenance Tasks:** Handled regular maintenance tasks like patching, security

remediation, and storage/index maintenance.

- **Collaboration & Product Design:** Participate in product design meetings, system testing, and data modeling. Collaborate with developers, system admins, project managers, and external consultants as needed.
- **Application Support:** Support both public-facing websites and back-end applications, working on SQL packages, PowerShell, and other scripts, and helping develop user interfaces.
- **Troubleshooting:** Diagnose and resolve production outages affecting websites and financial applications.
- **Documentation:** Create and maintain a comprehensive library of supporting DBA documentation.
- Change/Incident Management and Cloud Management.
- Managed OCI resources including Compute instances, Block Volumes, Object Storage, Load Balancers, and VCN .
- **Migration:** Migrated single instance databases to multimode 11g RAC environment for high availability and load balancing.
- Managed IAM policies, dynamic groups, compartments, and federated identity for secure access control across OCI.
- **Data Pump:** Data transferring with Export, Import, Data Pump and SQL* Loader utilities.
- Used Terraform with OCI Resource Manager for infrastructure-as-code (IaC) deployments .
- Assist with the loading and configuration of Oracle software starting from space requirements, kernel parameters setup to the Oracle installation.

Environment: Oracle RDBMS 10g/11g, RAC, ASM, OEM, RMAN, PL/SQL, Grid Control, Toad, Datapump, Linux. Service Now.

CAPGEMINI INDIA PVT LTD- Consultant, Bangalore, India

NOV 2014 – March 2016

Role: Junior Oracle DBA

Responsibilities:

Worked for the EFH, we supporting various individual businesses which EFH offers lifecycle services to support a wide range of power generation and transmission and distribution equipment and in air quality solutions and technologies that help reduce emissions, improve plant performance to customers in energy industry. EFH Energy's current product portfolio includes wind turbines with rated capacities ranging from 1.5 MW-4.1 MW and support services extending from development assistance to operation and maintenance.

- EFH Power Systems serves customers through an expanding portfolio of innovative, technology-based products and service solutions for the energy industry. Provided DBA support to multiple large databases in production, development and test environments for various types of databases - OLTP and Data warehouse. Part of a 24-member DBA team

managing databases. This included 25 production databases and 100 development/test databases with sizes of databases varying from 200 GB to 2.2 TB.

- Provided 24x7 on call DBA support for over 250 Oracle 10g/11g production, QA, DEV databases on RHEL, HP-UX, Sun Solaris
- Involved in the installation, configuration of multi node - 2 and 3 Node Oracle 10g/11g RAC with ASM.
- Migrated Oracle 9i/10g/11g RAC and non-RAC Single instance databases with ASM using Transportable Tablespaces (TTS), Data pump, SAN Synchronization SRDF.
- Upgraded production, Development databases from Oracle 10.2.0.5 to 11g/11g RAC.
- Performance monitoring and Database/Instance/clustered Application tuning using Dictionary views, AWR (Stats pack), ADDM, ASM reports, OEM Grid Control, tuned SGA/PGA parameters, initialization parameters and reorganized physical objects (tables & indexes) and tablespaces to improve the performance.
- Implemented high-availability and disaster recovery solutions using OCI native services
- Designed daily, weekly Backup and Recovery procedures for production, nonproduction databases using RMAN backups taking periodic Complete, cumulative and differential Incremental Backups.
- Data Refresh/Cloning from Production environment to setup QA/ DEV using RMAN Duplicate.
- Automated infrastructure deployment using Terraform and OCI Resource Manager for IaC
- Perform Regular Maintenance on the Production Oracle Database Instances to ensure the dead processes are cleared and to address memory leaks.
- Scheduled Monitor Maintenance Related Programs & alerts like Gather Schema Statistics, Purge programs etc.
- Handling P1 and P0 issues 24X7 and make sure to resolve it within SLA and work on the action plan to ensure the issues are not repeated again.
- Implemented high-availability and disaster recovery solutions using OCI native services
- Working with release managers, functional team and development team for planning the cutover to ensure error free delivery and minimum down time on database.
- Integrated OCI services with on-prem systems through hybrid cloud architectures using VPN or FastConnect.
- Working with the client closely to plan the enhancements and upcoming upgrades/projects and ensure to plan the resource in offshore and maintain the timely communication.
- Representing in weeks client calls and plan the changes accordingly on the database and to ensure the resource availability in the team.
- Troubleshooting Oracle 10g/11g databases day to day issues.
- Ensuring successful & periodical Backup using Hot, Cold, RMAN backups.
- Administrating Database segment growth on Tables, Indexes and rebuilding indexes if fragmented, also doing large tables re-org to get rid of fragmentation.

Environment: Oracle RDBMS 11g/10g RAC, ASM, 12c OEM, RMAN, Grid Control, Toad, Data pump, Sun Solaris, and HP Unix

IBM INDIA PVT LTD- System Engineer, Bangalore, India
AUG 2011 – OCTOBER 2014
Role: Oracle Core DBA.

Responsibilities:

Bell is Canada's largest telecommunications company, providing Mobile phone, TV, high speed and wireless Internet, and residential home phone services, Wire line, Internet and Mobility Satellite products.

- Providing 24 X 7 troubleshooting and support for over 120+ Oracle databases which includes Production, Stage, Development & Test instances with 99.5% uptime as SLA.
- Modifying the database structure, as necessary, from information given by application developers.
- Installed 11gR1 RAC, upgraded databases to Oracle 11g for test purposes and explored new features
- Installed, Configured and maintained multiple 10g RAC with ASM production, test databases.
- Developed, Configured and maintained Data guard (Standby database) for faster Disaster Recovery.
- Monitor capacity & system growth and usage for new hardware or software requirements and communicate these capacity requirements to Business in the Monthly Performance calls.
- Cloned/ Data Refresh from production to setup test and development environments using RMAN duplicate
- Excellent experience with OEM Grid control, TOAD which acts as a great platform where Database Quality, Performance and Availability functions for administration and development enable perform tasks.
- Recovery of Database (Recovering from Media Failure, Recovering the tables from Flashback, recovering data files, recovering from Block Corruption) using Flashback Recovery, TSPITR and from previous RMAN backups, Hot, Cold and user managed backups.
- Discussing about the new enhancements and patching outage window on production boxes with business in ccb calls. *Performance monitoring, Database tuning, Cluster Interconnect tuning using Dictionary views, OEM Tuning Pack, Diagnostic Pack, AWR (Stats pack) reports.
- Customer support over phone, OWC, customer tracking system tool.
Documenting Database Operations & Creating a CHECKLIST to manage smooth and stable environment.
- Applied database patches using OPatch utility.

Daily DBA activities: managing all the database files, alert logs, tablespaces, segments, extents, data blocks & physical storage, database network connectivity, database links, users, granting/revoking system/object privileges, querying data dictionary tables for metadata, setting init.ora parameters, database locking issues.

- Taking schema level backups using Import & Export*Experience in monitoring and tuning system resources associated with the database performance hit ratios, I/O, lock, latch contention and also monitoring for ORA-00600, ORA-07445 errors.
- Creating and updating Service requests (SR)

Environment: Oracle RDBMS 11g/10g, RMAN, Hot and Cold backups, OEM, Sun Solaris and HP Unix.

Education:

Master of Computer Applications (MCA) — Computer Science PES Institute of Technology, Bangalore — 2011
